

AXCESS LLC is a leading international value added regional distributor specializing in secure infrastructure solutions for business. What users want today are solutions which bring real business benefits. therefore, Our goals is to find products which make businesses work better and let you demonstrate a strong return on investment, making for a much easier sale are to provide quality services and products offering you the ability to obtain solutions that are focused on the highest standards of excellence, and a comprehensive support and training to our sales partners through working with organization to help our customers delivering their business in reduce cost. One of iAXCESS strengths is that our solutions are capable of expanding as your company's grows.

 Believes that our customers deserve the best that technology has to offer, so we provided customers with the ability to reduce the cost complexity and risk of managing and supporting a growing workforce outside the corporate firewall while improving productivity and securing corporate information. Every day iAXCESS delivers on this mission for millions of mobile and remote workers throughout the Middle East. Our vision is to develop an innovative approach that expands our services internationally through partnerships and alliances with companies that provide best services, Using ethics and constant investment in human resources is something we take very seriously, to achieve long term partnership and ultimate customer satisfactions, Today, this vision became a reality.

 Portfolio: includes a comprehensive range of security solutions, as well as web access and web management products, and we make sure that you get all the support you require to market, sell, install and support these products. Best-of-breed, high margin products, which offer you plenty of add-on sales opportunities.

Acronis is a world leader in providing advanced, scalable storage management and disaster recovery software that helps enterprises safeguard their information and assures the availability, security, integrity and recoverability of their infrastructure. Acronis' patented disk imaging and disk management technology have won broad industry acclaim and numerous awards for excellence in data protection, backup and recovery, system deployment, and server migration for both physical and virtual machine servers.

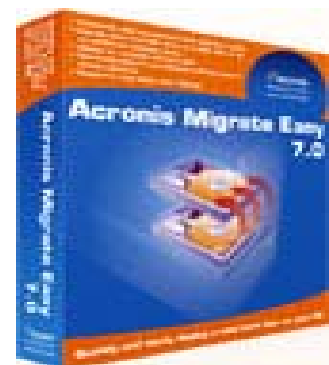

Acronis True Image 11 Home

Acronis True Image 11 Home provides the maximum flexibility to ensure you are adequately protected and can recover from unforeseen events such as viruses, unstable software downloads, and hard drive failures. Create an exact copy of your PC for a full backup or backup only your important data.

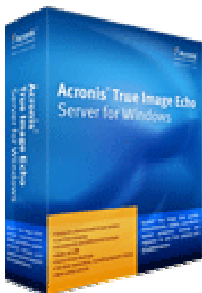

Acronis Migrate Easy 7.0.

Acronis Migrate Easy 7.0, software that migrates all your computer data, operating systems, programs, documents, address books, mail, settings and preferences in minutes automatically.

Acronis True Image Echo Server for Windows

Acronis True Image Echo Server for Windows allows you to create an exact Windows server disk image, including the operating system, databases, and applications; migrate your systems between any virtual and physical servers quickly and easily. After a system crash Acronis True Image Echo Server for Windows allows you to perform an entire server restore in just minutes, not hours or days. Complete system restoration can be performed to an existing system or to a new system with different hardware, as well as to a virtual server.

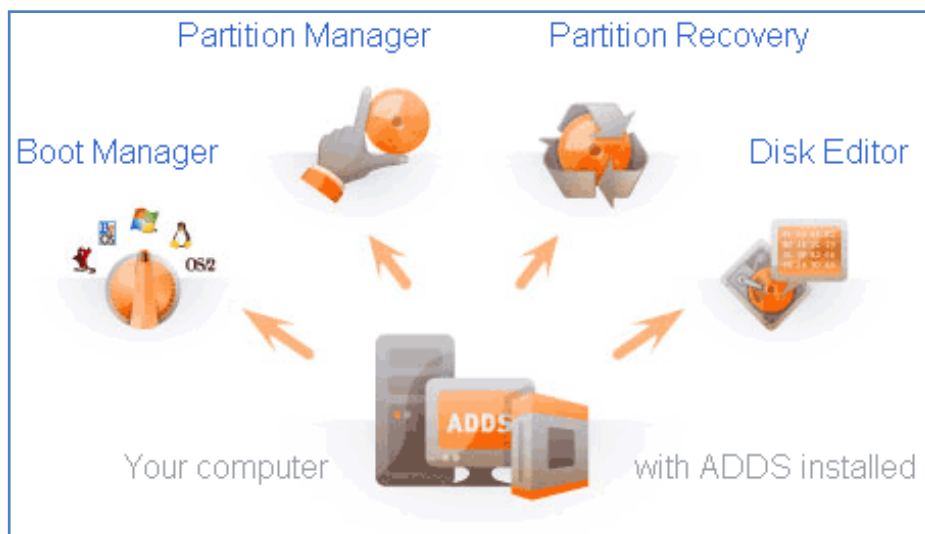

Acronis® True Image Echo Server for Linux

Acronis True Image Echo Server for Linux allows you to create an exact, live Linux server disk image: including the operating system, databases, and applications for a complete server backup and disaster recovery. After a system crash, Acronis True Image Echo Server for Linux allows you to perform the entire server restore in just minutes, not hours or days.

Acronis Director Suite 10.0:

Acronis Disk Director Suite 10.0 is the easiest and most convenient partition manager and hard disk toolkit. It brings together the most popular disk management functions, partition recovery tools, and boot disk manager.

Acronis Disk Director Suite 10.0 combines a number of previous Acronis disk management tools into one solution:

-  Partition Manager allows you to resize, move, copy, split, and merge partitions without losing your data.
-  Boot Manager is a multi-boot software utility that allows you to install multiple operating systems on your PC;
-  Partition Recovery allows you to recover accidentally lost or deleted partitions;
-  Disk Editor is a disk drive repair tool that allows you to perform advanced operations on your hard disk drive, such as restoration of boot records and hexadecimal editing.

Acronis® Snap Deploy 3 for Servers

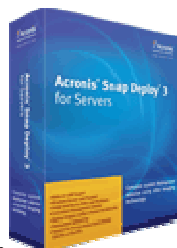

Acronis Snap Deploy 3 for Servers is a comprehensive deployment solution that enables IT organizations to deploy or restore servers quickly and easily.

Key Feature:

Deploy server snapshot to multiple systems simultaneously

Server with Snap Deploy® installed
Complete system deployment to servers

Deploy to different hardware with Universal Deploy add-on

Acronis True Image Echo Workstation

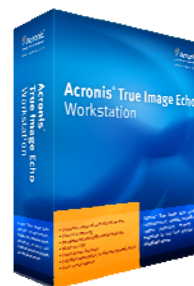

Acronis True Image Echo Workstation creates an exact disk image of your office desktop and allows you to backup key data files and folders. You can run backup jobs on multiple machines simultaneously on both 64-bit Windows and 32-bit Windows systems with the centralized remote management capabilities.

Features and Benefits

Restore the entire desktop in minutes after any unforeseen event.

Acronis Secure Zone — the Acronis unique hidden backup location on a hard drive for mobile users.

Discovery Features — Import and export computers through txt/csv files.

Acronis True Image Echo Enterprise Server

Acronis True Image Enterprise Server provides you a convenient way to manage backup jobs on multiple remote servers. Based on the exclusive Acronis Drive Snapshot technology, Acronis True Image Echo Enterprise Server allows you to create a server disk backup image without interrupting server operations, providing 24 x 7 availability.

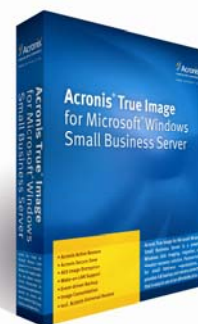

Key Features and Benefits

- Backup image encryption
- Multi-volume snapshots
- Convert image files to VMDK or VHD for instant virtualization

Acronis True Image for Microsoft Small Business Server

Acronis® True Image for Microsoft® Small Business Server delivers greater flexibility and value for networked small business servers. Acronis True Image for MS Small Business Server is comprehensive small business server backup and disaster recovery solution that allows you to get back to business as quickly as possible, minimizing downtime.

Acronis Snap Deploy 3 for Workstation

Acronis Snap Deploy 3 for Workstation is a comprehensive deployment solution that enables IT organizations to deploy or restore laptops and desktops quickly and easily.

Features and Benefits:

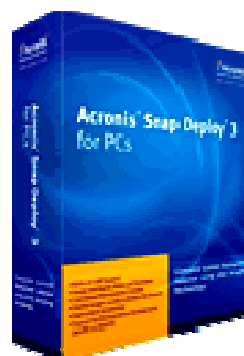

Deploy to different hardware with Acronis Universal Deploy — Ensure that your new systems will boot by allowing you to add drivers and create templates for specific hardware.

Fully automated deployment — New deployment options include Wake-on-LAN, deployment scheduling and a centralized management console to manage deployment tasks.

Advanced media builder — Facilitate deployment by providing more options for creating bootable media. Create ISOs, Microsoft Remote Installation Service (RIS) packages, and place multiple configurations on one CD.

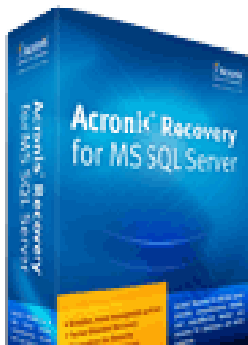

Customizable deployment options — maximize the performance of new machines by allowing partitions to be resized. Ensure that machines are properly deployed by providing options to reboot or shutdown after the master image is applied.

Fully compatible with Acronis Snap Deploy 2.0 and other Acronis products — Acronis Snap Deploy 3 for Workstation is capable to deploy images created with ASD 2.0 and Acronis True Image Echo.

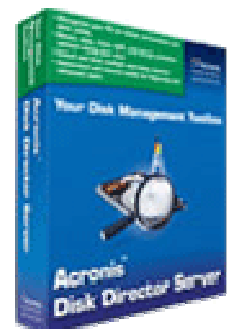

Acronis® Recovery™ for MS SQL Server

Acronis Recovery for MS SQL Server, a unified and intuitive backup solution, is critical to create a secure live database backup that can be recovered successfully. This powerful backup and restore solution includes an intuitive, wizard-driven GUI that guides you through the scheduling process and reduces the potential for errors. The Backup Strategy Assistant creates a Disaster Recovery Plan for your environment, delivering step-by-step instructions for recovery.

Acronis Disk Director Server 10.0

Acronis Disk Director® Server 10.0 provides you with powerful partition and hard disk management utilities to ensure your servers are running efficiently. Acronis has a long history of supporting all Microsoft operating systems and now continues that tradition with full Microsoft® Vista™ Support for Acronis Disk Director® Server 10.0!

Is a European multi-national IT security company leading the market in intelligent content recognition systems both in Europe and Latin America, is specialized in the integration of Filtering Systems into ISP (Internet Service Provider) network infrastructures, mobile telephony Operators and companies

OPTENET Web Filter

Web filtering solution lowers its dependence on URL lists and adapts itself to the dynamic nature of the Internet. Its online unblocking system will take care of any over-filtering error within ten short minutes and the reporting function will make supervision of Internet activity a breeze, allowing network administrators to generate a variety of relevant reports in a flash. Suitable for businesses and organizations of all sizes, including ISPs.

OPTENET Antispam

Relies on Intelligent Multilanguage Content Analysis to block spam. The level of false positives is inferior to 0.4% and it is eliminated through the use of a quarantine module and the challenge-response mechanism for sender legitimization. Antispam reaches efficacy levels of 97%. The solution processes up to 1 million spam / hour / module, with unlimited scalability

OPTENET Secure Content Management - Security Suite

OPTENET specializes in perimeter security for ISPs and Enterprises. Each component includes OPTENET's proprietary technology based on artificial intelligence techniques which have been in constant development for the last ten years. The result is clear: OPTENET provides the most efficient services according to the market's most demanding clients.

- WEB FILTER
- ADS FILTER
- ANTISPAM
- ANTIVIRUS
- ANTISPYWARE
- FIREWALL
- PROTOCOL MANAGER
- IDS/IPS
- REPORTING

OPTENET Firewall and Protocol Manager

OPTENET Firewall supports an unlimited number of connections and simultaneous configuration profiles. It can analyze up to one gigabyte per second per module. OPTENET Firewall includes IDS/IPS functionalities to complement the solution's proactive capabilities.

- **Protocol Manager: By service, port, IP Address or protocol and using OPTENET Pattern recognition techniques.**
- **OPTENET "Zero Attack" Intrusion Protection Service: As a complement to the IDS/IPS engine, OPTENET provides a proprietary technology which permits administrators to configure the traffic they want to allow, blocking all remaining traffic.**

OPTENET Secure Content Management - Web Filter PC.

OPTENET Web Filter PC software allows you to manage how and when each family member or worker uses the Internet. It helps optimize bandwidth and avoid internet problems due to improper access. Optenet is a content filtering service that protects users from intentional or unintentional access to inappropriate contents. By doing so, it assures the use of the Internet for truly educational or business purposes. It is also a tool which guarantees the protection of children at schools for parents.

Internet Parental Control.

Optenet PC Parental Control software allows you to manage how and when each family member uses the Internet. An Internet filtering solution that allows you to block and filter content categories: pornography, gambling, drugs, violence, more... Provides the safe Internet environment that you want and allows your child to surf the Internet safely. Your family's Internet activity is your concern, as a parent, the same way you need to be concerned with how your children spend their time outside of your home.

: is an international software company that rapidly became a world leader in information security software. That leverages all the expertise to provide Cutting-edge protection at every level against all major cyber threats: viruses, spyware, hackers and spam.

[Kaspersky Internet Security 2009](#)

Kaspersky Internet Security 2009 offers a worry-free computing environment for you and your family.

Key Features:

Essential Protection

Extended Protection

Preventive Protection

Advanced Protection & Recovery

Data & Identity Theft Protection

[Kaspersky Anti Virus 2009:](#)

Kaspersky Anti-Virus 2009 – the backbone of your PC's security system, offering protection from a range of IT threats.

Key Features:

Essential Protection

Advanced Protection & Recovery

Data & Identity Theft Protection

Kaspersky Mobile Security:

Is a convenient and reliable solution that protects smart phones from Internet attacks, malicious programs that target mobile platforms and SMS spam. It also provides protection for confidential data stored on a Smartphone should the device be lost or stolen.

Functions:

Anti-theft protection:

Antivirus protection:

Anti-spam for SMS/EMS/MMS.

Automatic updates.

Kaspersky Open Space Security:

Kaspersky Open Space Security is a suite of products designed to protect network structures of all sizes, from basic to complex.

Kaspersky Open Space Security meets and exceeds core requirements for comprehensive protection of corporate networks:

- A solution for all network nodes and platforms
- Protection against all types of Internet threats
- Rapid response
- Proactive technologies backed by traditional signature-based protection

Kaspersky® Business Space Security

Kaspersky Business Space Security provides centralized protection for workstations and file servers from all types of viruses, Trojans, spyware, roots kits and other contemporary Internet threats. Corporate information assets are secured and available for users accessing network resources in real-time from around the world.

Product Highlights

- **Centralized installation and administration**
- **Support for Cisco® NAC (Network Admission Control)**
- **Integrated protection for workstations and file servers from all types of Internet threats**
- **Load balancing between server processors**
- **Quarantine of infected workstations**
- **Roll back for malicious changes made to the system**

Kaspersky® Work Space Security

Kaspersky Work Space Security provides centralized protection for workstations both on the corporate network and those used remotely from all types of contemporary Internet threats, including viruses, spyware, hacker attacks and spam. Exercising full control over incoming and outgoing data (including email, web traffic and network interactions) on the PC, Kaspersky Work Space Security ensures full security for users, whether they are working on the office network or traveling on business.

Product Highlights

- **Integrated protection from viruses, spyware, hacker attacks and spam**
- **Proactive protection from even the newest malicious programs**
- **Personal firewall with IDS and IPS**
- **Roll back of any malicious changes made to the system**
- **Intelligent redistribution of resources during full system scans**

Kaspersky Enterprise Space Security:

Kaspersky Enterprise Space Security ensures a free flow of information within the company and secure communication with the outside world. The solution comprises components for the protection of workstations and servers from all types of contemporary Internet threats, removing viruses from email, keeping information secure and fully accessible to users of network resources.

Product Highlights

- Protection for mail servers such as Send mail, Qmail, Postfix and Exim
- Scanning of all messages transmitted via Microsoft Exchange servers
- Scanning of messages, databases and other objects on Lotus Domino servers
- Protection from phishing and spam attacks
- Blocking of virus epidemics
- Scalability

Kaspersky Anti-Virus Second Opinion Solution

Kaspersky Anti-Virus 6.0 Second Opinion Solution provides centralized antivirus scanning of workstations on a corporate network without causing conflicts with antivirus software from other vendors installed on the network.

• Advantages

- One more layer of antivirus protection..
- Can be used in parallel with other antivirus software.
- Centralized administration. Risk-free evaluation of an alternative solution.
- Easy migration to a different antivirus solution

Kaspersky Anti-Virus for File Server:

Kaspersky® Anti-Virus for File Server reliably protects servers running under Microsoft Windows, Novell NetWare, Linux and Samba from malicious programs including viruses, Trojans, spyware and more. Antivirus protection for shared file storage areas is essential, since a single infected file on the server may infect the workstations of all users of the resource. Proper protection of the file server not only ensures that users and their important information are protected, but also eliminates the danger of viruses making their way into backup copies of files, which may cause repeated virus outbreaks and other incidents.

Product Highlights

- On-access protection of file servers
- Prevention of virus outbreaks
- On-demand scanning
- iSwift and iChecker scanning optimization technologies
- Roll-back of malicious changes
- Scalability
- Load balancing

Kaspersky Anti-Spam:

Kaspersky Anti-Spam provides thorough and accurate protection from spam for users of corporate mail systems and public email services.

Additional Features:

Protection from spam

- Filtration based on DNSBL lists (DNS-based Black hole Lists)

SPF and SURBL filtration

- technologies
- Analysis of formal attributes

Signature-based

- analysis of messages
- Scanning of messages using linguistic heuristics
- Detection of graphic spam
- Real-time UDS requests

Kaspersky Anti-Virus for MIME sweeper

Kaspersky Anti-Virus® for MIMESweeper integrates tightly with Clearswift MIMESweeper to provide antivirus scanning and disinfection of incoming and outgoing traffic that passes through the security software. Email offers businesses a fast and versatile means of communication. It also, however, has its disadvantages. Malicious programs and spam are commonly sent in email messages, and email also provides a channel through which confidential data can be leaked. Kaspersky Anti-Virus for MIME sweeper offers an additional layer of protection for the mail server on your corporate network.

Product Highlights

- Real-time protection from viruses, worms, Trojans and other malware
- Remote administration using standard Clearswift MIMESweeper administration tools
- Security policies for user groups
- Scalability
- Automatic database updates

Kaspersky Security for Mail Server

Kaspersky Security for Mail Server is a solution that protects mail servers and groupware servers from malicious programs and spam. The product includes applications that protect all popular mail servers, including Microsoft Exchange, Lotus Notes/Domino, Sendmail, Qmail, Postfix and Exim. The solution can also be used to set up a dedicated mail gateway.

Kaspersky Total Space Security

Kaspersky Total Space Security provides integrated protection for corporate networks of any size or level of complexity from all types of contemporary Internet threats. Kaspersky Total Space Security exercises control over all incoming and outgoing data – including email, web traffic and all network

Kaspersky Security for Internet Gateway:

Kaspersky Security for Internet Gateway provides secure Internet access for all employees in the organization, automatically removing malicious and potentially hostile programs from incoming HTTP/FTP traffic.

Product Highlights

- Reliable protection from malicious and potentially hostile programs
- Real-time scanning of Internet traffic (via HTTP/FTP protocols)
- Filtration of Internet traffic based on a trusted server list, by object type and user group

Additional Features

- Isolation of infected and suspicious objects
- Convenient administration system
- System for reporting on component status
- Scalability
- Automatic updating of databases .

Services for Business

Kaspersky Lab now offers various services for business customers, including Premium Support Services and Hosted Security Services. Some services may not be available in all locations. Kaspersky Non-Stop Security for Service Providers. Kaspersky Non-Stop Security for Service Providers is a solution specifically for service providers who wish to extend their range of services by offering users a subscription to Kaspersky Anti-Virus 6.0 or Kaspersky Internet Security 6.0.

Advantages

- extended range of services for subscribers
- easy installation onto the provider's current infrastructure
- low cost of integration and service startup
- opportunity to offer packages with different subscription periods
- enhanced security for the network as a whole as a result of the increased number of protected users
- lower technical support costs since fewer users will experience malware-related problems

iPass : offers you World Wide Access through Mobile Office Solution giving your staff secure access 24 hours a day for a cost of local phone call plus a small connection charge. The services cover all popular access methods, in over 178 countries including: Dial-up, WI-Fi hotspots, hotel Ethernet, 3G mobile data, corporate wireless LANs and home broadband connections.

iPass Mobile Office

Give your mobile workers a safe, simple and reliable way to access the Internet and corporate network over 78,000 dial-up, Wi-Fi hotspot and hotel Ethernet broadband connections in over 178 countries.

iPass MOBILE OFFICE SERVICES OFFERS

**Connectivity: Global
Coverage**

Security: Encrypted Login

Management:

Simplified Billing .

iPass Device Management

- Manage and protect end-user devices over the LAN and across the Internet
 - Easily implement and maintain a flexible platform that automates a wide range of system management tasks.
 - Deploy patches, security updates and applications as soon as remote devices touch the Internet—without requiring a VPN connection.
 - Gain high-performance features that keep users productive while desktops, laptops and handheld devices are managed.
-
- **Implement a Single Solution for Local, Remote and Mobile Systems.**
 - **Increase IT Productivity with Automated Management Functions**
 - **Protect End-User Devices, Safeguard the Business**

PDA Mobile Client

Global Coverage

Enable users to access the iPas global virtual network through thousands of Wi-Fi, Ethernet, ISDN, dial and PHS access points in more than 178 countries

- A device fingerprinting technology that permits only specific corporate-authorized devices to access the enterprise LAN.

Count on redundant providers, iPass Enterprise Ready testing and the patented Service Quality Management system for safe, reliable connections

Give users a single, unified connectivity experience over all networks with the iPassConnect universal client. issued or -authorized machines access the network. Require use of iPassConnect™ and Device .

iPass integrates Wi-Fi connectivity as part of the iPass Mobile Office service. It lets mobile users obtain the productivity benefits of using public Wi-Fi hotspots while universal enforcement of security and connectivity

Protecting corporate assets and maintaining policy-based control over access count on Mobile Office to make your Wi-Fi connectivity solution

Strengthen Network Security with Multi-Factor Authentication

Universal Policy Enforcement

iPassConnect™ PocketPC for Mobile allows remote users to connect to the Internet through iPass global network of providers. It has a point-and-tap interface for connecting to iPass access points, and will operate on any handheld device that uses:

Microsoft® PocketPC 2006.

Microsoft® PocketPC 2005
Symbian

Features:

- Automatic detection of Wi-Fi networks, also known as Wi-Fi sniffing.
- Historical tracking of recently used access points for ease of reuse.
- Ability to update the software over the Internet

NETASQ offers unified security solutions comprising a range of appliances that combine a firewall with a unique real time intrusion prevention technology and plenty of other security features (antivirus, antispam, web filtering, QoS, etc).NETASQ continues to rely on the foundations that have contributed to its success in the past few years - the quality of its products and technological innovation. Its aim is to offer, version after version, innovations that guarantee clients the continuity of their businesses and sustain confidence in the security of their infrastructure.

Firewall: F25 APPLIANCE

F25 appliance integrates a wide array of security technologies such as a stateful application firewall, a real-time intrusion prevention system (IPS), IPsec and content filter system (antispam, antivirus and URL filter). This all-in-one approach eases the deployment, maintenance and update of a full security solution that provides the best level of protection.

Firewall: F50 APPLIANCE

F50 appliance protects the network and its users without the need for a long and tedious installation phase that may disrupt the company's activity. NETASQ's F50 UTM appliance, the first 3-port product in its range, enables the setup of a DMZ (de-militarized zone), which contains all the private servers that can be accessed from outside the network, while preserving the security of the internal network, making the appliance ideal for small structures seeking to keep their website and mail servers inside the company.

F60 APPLIANCE

The F60 is the ideal product for smaller businesses seeking to break free from external hosting solutions and be more autonomous in managing the critical aspects of their network architecture and sensitive systems such as the mail service or the website. Its compatibility with the NETASQ Global Administration software makes the F60 all the more appealing to companies wanting to entrust the management of their network's security to a certified service provider. The development of this product was motivated by two main factors - the requirement small-to-medium businesses have for the integration of multiple security features in one product and an attractive total cost of ownership.

F200 APPLIANCE:

a perfect model of what a UTM appliance should be, possesses the full set of security features found in the NETASQ product range - a stateful firewall, real-time intrusion prevention system, IPSec VPN hub and SSL VPN access portal, internal PKI and content filter system (antispam, antivirus and URL filter). While staying resolutely open to the internet, the F200's built-in IPSec VPN and SSL VPN features and internal PKI guarantee the confidentiality and authentication of communications between sites and even to mobile workstations.

F500 appliance:

Has a modular design and is available in two versions. Equipped with 4 10/100 Mbps Ethernet ports in its standard version, it is also the first product in its range to offer up to two gigabit interfaces. The transition to a high-throughput network is quick and simple with an F500 appliance, requiring only the activation of licenses, since gigabit ports are already built into the appliance. Performance-wise, the F500 supports throughput of up to 450 Mbps in firewall mode with intrusion prevention activated and 120 Mbps with traffic encryption (VPN throughput enabled with AES encryption), while providing a high level of security and excellent accessibility of servers in DMZ.

F800 APPLIANCE

F800 contains 8 gigabit interfaces! These interfaces translate to greater speed capacities and more significant bandwidth and throughput. The first product in NETASQ's range to have only Gigabit interfaces, the F800 appliance is ideal for organizations that seek optimum protection while benefiting from high-performance architectures. Studies point to the internal network as the source of most threats, so being able to segment a network into trusted zones (zones can be segmented by department, by server or by the floor in the building) becomes the next logical step, in which traffic has to pass through the UTM appliance when moving between zones.

F1200 APPLIANCE

NETASQ's range of UTM products continues to expand and build upon functional and technical improvements that make this mid-range offering the most effective multi-threat appliance in its class. The F1200 has 10 Gigabit interfaces and throughput can get as high as 1.6 Gigabit per second! It responds to the expectation in fast-growing businesses that networks should be fully protected without impacting performance - the F1200 fulfils requirements for bandwidth, speed and throughput. NETASQ's F-Series family of security appliances are designed to address the requirements of organisations of every size.

F2500 APPLIANCE

Security, performance and availability are the mainstays of the F2500, which benefits from security features such as a stateful firewall, realtime intrusion prevention system, IPSec VPN hub with SSL VPN portal, internal PKI and content filtering system (antispam, antivirus and URL filters), all while maintaining throughput of 2 Gbps. Furthermore, this appliance offers a significant level of availability thanks to, among other things, its redundant power supply and RAID disk system. Using the F2500 is simplified significantly by the NETASQ Global Administration software that provides a wealth of administration, reporting and log management features.

F5500 APPLIANCE

Using the F5500 is simplified significantly by the NETASQ Global Administration software that provides a wealth of administration, reporting and log management features. NETASQ's offers a product range with an elevated added-value from a technology point of view and is distributed by highly regarded, certified partners. These solutions offer the maximum level of security, functionality and performance.

NETASQ U1500

ASQ zero-day intrusion prevention. Network segmentation. Service continuity. The U1500 in the "U" series are ideal security solutions for the largest enterprise network sites. Multigigabit performance and plenty of interfaces also turn them into the perfect protection tools for sensitive demilitarized zones.

Advantages of the U1500 solution

- **Effectively manage your risks**
 - . Capitalize on all of the ASQ protection engine's innovations.
- **Speed up your development**
 - . Relying on a high-performance infrastructure pays off.
- **Save time**
 - . With the help of a solution that is easy to administer.
- **Save money**

NETASQ U6000 :

Multi-Gigabit IPS Performance. Service continuity. Hardware redundancy
The U6000 appliance in the "U" series is the ideal security solution for head offices and the most frequently accessed public sites. Its impressive performance and redundant hardware architecture will attest to its value when protecting high-traffic sites.

U6000
more ▾

ANTI-VIRUS

■ NETASQ solutions :

To ensure that its clients get the best protection, NETASQ relies on the combination of 2 technologies that use a full antivirus database.

All NETASQ products are sold with the ClamAV engine, which contains more than 10,000 antivirus databases. ClamAV is a reputed open source antivirus which allows many file formats to be analyzed and its database of antivirus signatures is very regularly updated. NETASQ has also joined forces with Kaspersky Labs and embeds its heuristic analysis engine and the full database of antivirus signatures or more than 180,000 signatures to date. The Kaspersky antivirus is the undisputed leader in antivirus technology, both for the frequency of updates as well as for the quality of its heuristic analysis engine and the swiftness with which antivirus signatures are published. Kaspersky has come out tops in many comparative analyses based on criteria such as the number of viruses detected, swiftness in publishing new signatures following the appearance of viruses, and low number of false alerts.

MFILTRO :

THE SPAM PLAGUE

PROFITABLE AND EFFICIENT

With its NETASQ MFILTRO product range, NETASQ offers up an efficient response to all your email problems. NETASQ MFILTRO protects your email server and is fully transparent to your employees.

Backed by 10 solid years of experience and success in building and providing security products, NETASQ has incorporated the best available technology into a very versatile email security product range.

The combination of heuristic Antispam, Antispyware and Antiphishing technologies within NETASQ MFILTRO provides your employees with security and enhances productivity. It also returns email to its original goal – that of being an effective communication tool.

NETASQ's choice of the Kaspersky Antivirus engine guarantees that your company gets the best Antivirus protection possible. A consolidated reporting dashboard allows you to measure your return on investment in real time because at the end of the day, you want to ensure that your employees are productive. NETASQ MFILTRO allows you to control the spam plague and measure how much wasted time your company has saved.

Netasq SEISMO

HIGHLIGHTS OF NETASQ SEISMO :

■ Managing Risks

NETASQ SEISMO is a new real-time analysis tool embedded within the ASQ engine. From a strategic location at the heart of the operating system, it provides the administrator with relevant information regarding the level of risk that its infrastructure faces.

This multi-patented technology allows NETASQ UTM's to offer true added value to companies seeking to optimize security. Based on the information that NETASQ SEISMO provides, the significance of an alarm can be evaluated according to vulnerabilities found on the targeted host, or the administrator can immediately be informed of new risks that appear on the company network, such as an obsolete or vulnerable application.

■ Performance and Efficiency

NETASQ SEISMO relies on analyses of the ASQ intrusion prevention engine protocols. Therefore, only information that matters is gathered. As such, performance is guaranteed. Furthermore, the algorithm that treats and correlates the different types of information gathered makes NETASQ SEISMO an extremely accurate tool.

■ Correction decision assistance

As soon as SEISMO is enabled on a NETASQ UTM, it will download and automatically update several vulnerability databases, each of which is related to one or several application contexts.

When new information is incorporated into the host's identifier or when a vulnerability database has been modified, NETASQ SEISMO updates the information straightaway and performs the necessary actions. Lastly, if a bug fix exists for a vulnerability, the information on the database will show the administrator where to find it.

HIGHLIGHTS OF NETASQ SOLUTIONS

Antispyware:

This type of program operates continuously, without the user necessarily being aware of it. Spyware is often installed along with other free software. The author of a software program that hosts a spyware program may sometimes receive a commission from the spyware publisher. Certain websites may also use alluring pages (offering video or animations, for example) to trick users into executing installation scripts that download and install spyware through the browser. The information obtained may then be used to form a targeted advertisement, in the user's language. If a credit card number is obtained, the consequences would be far less benign. NETASQ now provides protection from these spy software programs through its intrusion prevention engine, ASQ. When spyware, which NETASQ classifies in a broader category called "Malware" (which comprises all harmful software) is detected, the administrator will be notified and can then proceed to clean the infected workstation using some of the many software antidotes available on the market. What's more, to ensure an optimum level of security, the list of spyware programs is regularly and automatically updated thanks to automatic update features on NETASQ appliances.

Antiphishing:

Internet hackers have not invented anything new in the art of swindling. Among the techniques that they have adapted, one of most effective must surely be social engineering. This technique involves usurping the identity of a "trusted" person for the purpose of obtaining personal and/or confidential information from a target (such as a password). NETASQ protects users from antiphishing attacks by combining antispam with contextual signatures and web filters. The antispam analysis identifies this type of message and the cover-up techniques that the hackers use. As for websites that take on the identity of a known site, they will be referenced in a URL filter database, thus preventing the user from accessing them.

Is designed specifically to meet the needs of corporate business, and is packed with numerous features to help IT professionals get the most out of remote control technology. The NetOp Remote Control software is typically used for remote network management, remote system administration and in helpdesk environments. Based on an incredibly stable, fast and user-friendly remote control system, this program offers unrivalled flexibility, supporting all commonly used operating systems and communication protocols.

NetOp Remote Control

NetOp Remote Control 9.0 is the latest version of remote control software. It's designed specifically to meet the needs of corporate business, and is packed with numerous features to help IT professionals get the most out of remote control technology. NetOp Remote Control's intuitive interface and variable settings mean you can literally mold the system to support the way you do business. What's more, NetOp Remote Control software offers the most comprehensive security regime on the market.

NetOp Mobile

Service Release 1 of NME version 9.0 introduces Remote Management for mobile devices and embedded Windows CE solutions. Like Remote Management for Windows based computers you now have full management capabilities on Windows Mobile and Windows CE based devices. With NetOp mobile, you can share and safeguard mission-critical resources – no matter where they are – and do the following tasks easily, quickly, and safely:

- Remote user support from corporate helpdesk
- Remote administration
- Remote maintenance.

NetOp School

NetOp School brings a complete, computerized teaching solution to the networked classroom. Share any screen with the class, follow students as they work and lend a hand where and when it's needed, control what applications can be used, distribute and collect documents from students and create and perform regular tests with immediate individual feedback.

NetOp School lets you prepare for class, teach your students, and grade their work in one complete solution. Discover more by clicking the words below.

NetOp Mobile & Embedded

- Comprehensive remote control solution for Windows CE/Mobile-based devices
- High-quality remote maintenance and remote support of PDAs, smartphones, handhelds and Windows CE-based systems
- Reliable file transfer for copying, shifting, synchronizing and cloning of data
- Integrated function for straightforward help request by the end user
- Outstanding performance, even with narrow-band connections.

NetOp Instruct

NetOp Instruct is a computer-based training tool with a host of uses that will enable you to nurture and maximize the potential of your most important asset – your work force.

NetOp Instruct brings a complete, computerized training solution to the corporate network. Broadcast your screen, let attendees share screens to collaborate on common documents, lend a hand where and when it's needed, and create and perform regular tests with immediate individual feedback.

NetOp On Demand Remote Control

NetOp has taken its world-famous remote control technology and created NetOp On Demand to enable temporary helpdesk sessions across the Internet without any firewall configuration. By downloading a small, self-executing program, end users can receive true hands-on help from your helpdesk staff. Using NetOp, your helpdesk representative can see the end user's screen, move the cursor, click, type – and even transfer files. And when the program is closed again, it automatically deletes itself from the end user's hard disk.

[NetOp Net filter for Business - Protect and optimize](#)

NetOp Netfilter gives corporate management an important tool for this consideration and guides and counsels the employees about the content of the Internet pages they use. Both Internet usage and bandwidth consumption are optimized in this manner - and the company saves money and experiences increased productivity. Many companies have not yet set up an Internet Policy, thus basically allowing their employees full and unrestricted access to the Internet during working hours. Unfortunately the Internet contains vast amounts of irrelevant information and data that may not only have an impact on productivity, but can be harmful for the company and its image. Our Internet filter is the most intelligent and flexible content filter for managing corporate Internet access.

[NetOp Netfilter for education - protect against objectionable material](#)

NetOp Netfilter is perfectly suited for integration into the school or library network. Besides warning or blocking pornographic material, you can also setup the filter to warn or block access to illegal music and software, inappropriate categories such as violence, racism and hatred, and much more. You simply get a pedagogical tool for clearly displaying your policy and attitude towards Internet usage on the school and/or library computers. A unique feature of the NetOp Netfilter is its capability not to apply strict censorship if not wanted. As administrator you are able to specify whether or not the filter should block or just warn against unwanted material. Protect your students and visitors with NetOp Netfilter the most reliable content filter available. The content filter software is developed by expert researchers and uses advanced image analysis combined with text and behavior analysis to protect the public room.

NetOp Desktop Firewall

The NetOp Desktop Firewall is designed specifically to meet the needs of corporate business. It is packed with numerous features to help IT professionals get the most out of firewall technology with its strong and unique features as a stand-alone or as a centrally managed system for distributed firewalls.

In most enterprise networks the IT Department has no way to check the integrity of their laptop devices before allowing them onto the network. The use of wireless access points for employees and visitors, allows computers inside the corporate firewall and thereby compromising firewall security. If the laptop is not a trusted device, then it is a rogue device that could be infected with a worm or Trojan, which could spread to other devices on the network. Therefore personal firewalls installed locally on enterprise computers, functions as an aid to the existing corporate security firewall.

NetOp Learning Center*

Support the entire learning curve. Keep learning. Stop forgetting. And break the learning curve. That's the basic mission behind NetOp Learning Center, one of the strongest Learning Content Management Systems in the marketplace.

Organizations and businesses: Industry leaders get a unique opportunity to ensure lifelong learning for their employees.
